

How to assemble your deer head

No glue, no tools: the pieces simply slot together.

3 mm plywood · laser cut

About 15 minutes

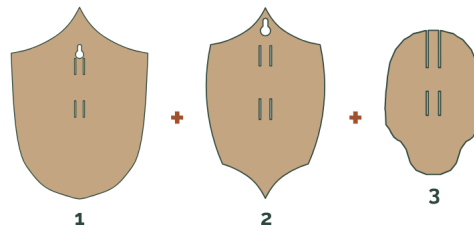

Ages 14+ · best done as a pair

 Made in France

1

The three base pieces

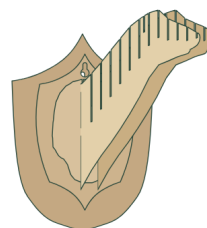

Start by gathering the three pieces of the base (pieces 1, 2 and 3): stack them on top of each other, lining up their slots.

2

The two profile pieces

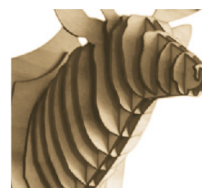

Next, insert the two profile pieces (the only two without a number) into the slots of the base, at right angles to it.

3

The numbered pieces

Slot in the remaining pieces in numerical order, **from back to front**.

back → front

4

The antlers

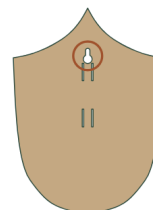

To finish, slot the antlers into their notches at the top of the head.

5

Hanging

Hang your deer on a nail or a screw using the keyhole-shaped hanging slot (circled opposite).

And here's the finished result!

Make it your own: the wood can be painted directly (wood stain, paint or paper decoupage).

Wood. A story. A one-of-a-kind piece.
