

How to assemble your bull head

No glue, no tools: the pieces simply slot together.

3 mm plywood · laser cut

About 15 minutes

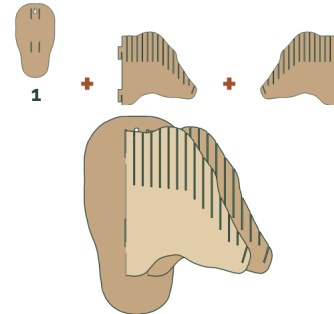

Ages 14+

 Made in France

1

The base and the two profile pieces

Take the base (piece no. 1), then insert the two profile pieces (the only two without a number) into its slots, at right angles to the base.

2

The numbered pieces

Then slot in the remaining pieces in numerical order, starting with no. 2, **from back to front**.

3

The horns

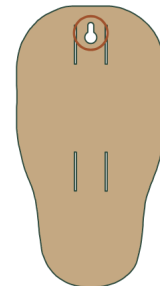

To finish, slot the two horns onto the head. They come already assembled: there is nothing to put together.

4

Hanging

Hang your bull on a nail or a screw using the keyhole-shaped hanging slot (circled opposite).

And here's the finished result!

Make it your own: the wood can be painted directly (wood stain, paint or paper decoupage).

Wood. A story. A one-of-a-kind piece.
